To all responsible parties,

After attending an information session, regarding the Treatment Plant plans,

I have come to the conclusion that some of our councillors do not care about their existing residents concerns.

I moved to Oakville/Halton two years ago from Mississauga. I am not sure it

was a good move. I built a new home on the Lakeshore Road next to the waste water treatment plant.

I found in the past that the odours was so bad at times I could not have my

windows open, regardless of the temperature. Night time was even worse, as I

think it was planned that way.

The algae is also a major concern all along our lakefront. Again probably

directly proportionate to phosphate levels.

I was shocked to hear that there is new technology that could improve both

phosphates and smell and these were not used as part of the equation.

The four most important things in our lives are, Water, Air, Food and a Roof

over our heads. If the water and air stinks in Oakville I may have to find

food and a new roof someplace else.

John Hinksman
