

Dear Mr. Elgar,

After reading through information passed to my attention regarding the abovementioned subject, I wish to add that I believe very strongly that the time be extended so "complete and proper" studies can be done. **"ODOUR" should absolutely be one of the criteria considered** in any action being taken, or included in any further studies being carried out. Commuting via GO transit over a number of years, one only has to "smell the air" during the summer months when the algae on Lake Ontario begins to emit that **horrendous odour!** As a result, one can certainly imagine what it would be like to smell similar and far worse odours from a near-by expanded sewage treatment plant!!

I write this note to you with the hope that all due consideration will be taken **BEFORE** final plans are put through!

Thank you for your time and efforts.

Sharon Lyn
